fundamental solutions in understanding information have been elusive for a long time the field of artificial intelligence has proposed the turing test as a way to test for the smart behaviors of computer programs that exhibit human like qualities equivalent to the turing test for the field of human information interaction hii getting information to the people that need them and helping them to understand the information is the new challenge of the era in a short amount of time the infrastructure of the became ubiquitous not just in terms of protocols and transcontinental cables but also in terms of everyday devices capable of recalling network stored data sometimes wire lessly therefore as these infrastructures become reality our attention on hii issues needs to shift from information access to information sensemaking a relatively new term coined to describe the process of digesting information and understanding its structure and intricacies so as to make decisions and take action

the innovation infrastructure and master plan described in this book offers a detailed and comprehensive approach to one of the most difficult and challenging problems facing entrepreneurs involved in innovation at any scale enterprise the problem of how to govern your organization s innovation initiatives in the middle of turbulent change progress in any field requires the development of a framework a structure that organizes the accumulating knowledge enables people to master it and unifies the key discoveries into a set of principles that makes them understandable and actionable for starters successful innovation requires an integrated design process beginning with integration in the design of the enterprise the design of the product along with the design and implementation of new technologies such an integrated design effort requires good collaboration and management of the design framework and should be supported by efficient knowledge management techniques and tools if innovation is to help a business grow and improve its competitiveness it is also important to plan the innovation carefully this book provides a holistic multidisciplinary framework that will enable your organization and its leaders to take a strategic approach to innovation the framework combines non traditional creative approaches

to business innovation with conventional strategy development models the framework model brings together perspectives from many complementary disciplines the non traditional approaches to innovation found in the business creativity movement multiple source strategy consulting the new product development perspective of many leading industrial design firms qualitative consumer customer research future based research found in think tanks and traditional scenario planning and organizational development od practices that examine the effectiveness of an organization s culture processes and structure though some ideas may just fall from the sky or come out of the blue an organization should also have a strategic vision of how the business and the enterprise will successfully develop it should not just wait for the innovation to arrive arbitrarily but rather proactively plan for innovation incorporating market trends the competitive landscape new technology availability and changes in customer preferences and trends in order to create a flexible in house innovation process such an enterprise will also pro actively manage the knowledge supply chain that supports innovation as outlined in this book 7 of management handbook for results series the framework outlined in this handbook consists of a well integrated cohesive set of practices that inspires imaginative innovation teams to look beyond the obvious and explore a broad range of possibilities to identify significant opportunities and make informed decisions about the most promising paths to pursue the goal is to create a shared vision for growth along with defining pragmatic action plans that bridge from the future back to the present while attempting to align the organization around the requirements for success

thailand is somewhat lagging behind other countries in southeast asia in adopting the concept of payment for environmental services pes as an instrument for creating incentives for natural resources conservation there are a number of activities involving payments for provision of activities or environmental services but these are missing many elements that would qualify them as a pes project others are mainly at the design stage or at the initial stages of implementation one of the major challenges is to create recognition of the benefits from ecosystems services presently private sectors attach considerable importance to csr projects there is nothing wrong with csr projects but csr activities do not address missing markets nor aim to create incentives to undertake conservation measures on a sustainable basis to create demand on a

scale that would give the momentum for pes would require a revamp existing legal tools to create effective demand for conservation services it may be strategically better to approach the private sector institution such as the federation of thai industries and the thai chamber of commerce rather than individual private companies without this csr investment is likely to be spread so thin and while succeeding in promoting publicity of private companies tangible outcomes in improving the environment are likely to be limited although biophysical conditions precede other criteria for selection of potential pes project sites given that there is an estimated number of forest dependent people of 1 to 2 million people most of whom believed to be poor and living in environmentally sensitive areas it is undeniable that pes can be instrumental to addressing poverty alleviation objectives a major challenge that must be addressed however is the legal framework although not explicitly endorsing the concept of creating incentives for service providers the relevant laws can be and needs to be relaxed in specific cases particularly where pes types projects will be launched in protected areas where there are legal restrictions over access pes can also supplement the legal provisions to protect biodiversity resources like all public goods over exploitation of biodiversity resources is due to the failure to recognize that the economic value exceeds the market prices of the tradable parts of biodiversity resources unless there is recognition of the non tradable benefits biodiversity resources will continue to be underpriced and under valued hence the potential contribution of the concept of pes projects to create recognition demonstrate its economic values and link between the demand and supply side to capture those values

the banking industry architecture network bian is a global not for profit association of banks solution providers consultancy companies integrators and academic partners with the shared aim of defining a semantic standard for the banking industry covering all banking activity and almost all of the well known architectural layers bian s reference architecture for the financial industry provides its users with a set of building blocks that when used in different combinations can support all of the functionality and information a bank needs for both its internal functioning and its collaboration with partners in an open finance and open api economy bian s reference architecture for the financial industry is freely available on the bian website this
